SEQUAL ANNOUNCES THE SMARTPULSE THEIR NEW FINGERTIP PULSE OXIMETER

New SpO₂ Solution Offers Multi-Color Display and Unmatched 4-Year Warranty

SAN DIEGO—SeQual Technologies Inc., who develops the Eclipse 2™ with AutoSAT™ Technology announced today they are offering the SmartPulse, a fingertip pulse oximeter. The SmartPulse is a small, reusable fingertip oximeter that quickly spot-checks oxygen saturation levels (SpO₂) for oxygen therapy patients. It offers fast, accurate readings with a full multi-color LED display for easy reading during the day or night. The large SpO₂ display appears in green, yellow, or red depending on the user's oxygen saturation levels. It is FDA-approved and made in the USA. The product comes with a 4-year warranty, which is unmatched in the industry. The SmartPulse is the perfect complement to the Eclipse 2 for patients who choose to check oxygen saturation levels during exercise or when traveling to higher altitudes. SeQual also distributes the Masimo line of pulse oximeters, and now offers a range of pulse oximetry options ranging from desktop to handheld to fingertip models.

“Making sure our patients are well saturated at rest, during exercise, while sleeping and traveling at altitude continues to be our main focus,” said Ron Richard, CEO of SeQual Technologies. “The Eclipse 2 with AutoSAT has been well received and is able to deliver over 100 ml of oxygen up to 30 breaths per minute. With the addition of the SmartPulse oximeter line, it makes it easy for patients to check their saturation levels much like a diabetic patient uses a glucometer to check their blood sugar. The Eclipse 2 remains the only battery powered personal portable oxygen delivery system that can provide up to 3 liters of continuous flow and can be used as a 24/7 solution for LTOT patients. SeQual Technologies Inc. will continue to expand our portfolio of products as we concentrate on the needs in the rapidly growing respiratory market.”

SeQual's flagship product, the Eclipse 2™ with AutoSAT™ Technology is the only oxygen concentrator on the market today that provides the flexibility of delivering oxygen in pulse mode or up to 3 LPM of continuous flow in a 24-hour/7-days-a-week portable device. By using the highest quality components such as the durable Thomas double-wobble compressor combined with our patented Advanced Technology Fractinator, the system can produce long term reliable results for the provider and patients. An additional key feature available in the pulse mode is the ability to adjust the sensitivity setting which lowers the work of breathing and improves performance and comfort for the patient. The Eclipse 2 is FAA approved for commercial airline travel and operates up to 13,123 feet.

ABOUT SEQUAL TECHNOLOGIES INC.

SeQual Technologies, founded in 1991, is a market-driven, technology-based company with the mission to develop, manufacture and market unique products for medical, military, industrial and commercial applications that utilize the Company's proprietary pressure swing adsorption (PSA) technology for air separation. Since 1998, the Company has focused on the development of medical oxygen concentrators; devices that separate oxygen from air to provide supplemental breathing oxygen to individuals with chronic lung disease. SeQual's line of medical oxygen concentrators ranges from its recently introduced, award-winning, Eclipse oxygen system to its high-capacity Integra 10 (10 LPM) bedside unit.
